Available full-time, fully remote.

SUMMARY

Freelance systems engineer since 2020: 39 paid jobs with client reviews, 5.0 average, clients in 19 countries, tickets from $10 to $497. I install, support and repair the stack hosting providers sell: Linux VPS, Pterodactyl and FiveM game panels, domains, DNS and SSL, self-hosted applications. Three clients hired me a second time. The work is client-facing in English, Spanish or Italian.

EXPERIENCE

Freelance Systems Engineer · Self-employed · 2020 to present

39 client reviews, 5.0 average, 37 of them five stars. Clients in 19 countries. Tickets from $10 to $497. Three clients bought a second time.

- Game hosting: installed and repaired Pterodactyl panels and Wings nodes and wrote custom FiveM eggs. An Italian host bought twice, first a panel repair, then an extra node and a server egg.
- Domains, DNS and SSL: moved records and nameservers during client migrations, handled domain transfers, and installed Let's Encrypt and commercial certificates behind Cloudflare and cPanel.
- Linux operations: provisioned and hardened VPS instances on Ubuntu, Debian and Rocky Linux, with firewall rules, SSH access control, fail2ban and backups whose restores were tested rather than assumed.
- Self-hosted applications: Alfresco Community with TLS on Rocky Linux for a Nigerian company, Jitsi Meet for a Mexican client (the largest single ticket at $497), Frappe/ERPNext, Heyform on Ubuntu 22.04, Ghost testnet nodes and FastAPI sites.
- Support and incidents: answered hosting and server questions in writing for international clients and solved problems in live sessions over SSH and RDP, including SSL installs, AWS EC2 and Lambda configuration, and an Ubuntu and VMware access problem that had the client blocked.
- Long-lived installs: the Alfresco and TLS deployment on Rocky Linux earned a review naming me first choice for Alfresco work, and the newest job on the record, a VPS streaming stack in Lebanon, ended with the client saying he would return.
- Automation: Selenium test frameworks in Java for a Canadian client, Python and Node scrapers, including a Chilean credit bureau site other freelancers had refused, plus Telegram bots and stock-tick data pipelines.

PROJECTS

VERIDEX, document search that quotes its sources. Local search over PDF, text and code. Every quote is read again from the source file before it is printed, so a wrong answer cannot pass as a citation. Python, SQLite full-text index, offline by default, sandbox for model-written code. Tests per module.

cbticks, hit timing for Minecraft 1.8.9. Java agent loaded with -javaagent that reads packet ids from the buffer instead of matching class names, so an obfuscated client update does not break it. The overlay shows PERFECT, LATE or REFUSED while the damage window is open.

External black-box audit of a game server. Full TCP and UDP ranges, several TLS versions, nuclei, ffuf and request smuggling checks. Findings sorted by severity, each with the command that produced it, negative results included.

SKILLS

Systems: Ubuntu, Debian, Rocky Linux, SSH, systemd, firewall rules, fail2ban, cron, backups and tested restores, VPS provisioning and hardening

Hosting and domains: DNS records and nameservers, domain transfers, SSL and TLS certificates, Let's Encrypt, Cloudflare, cPanel, Nginx, Apache, Caddy, reverse proxy

Game hosting: Pterodactyl panel, Wings nodes, custom FiveM eggs, Minecraft servers

Applications: Alfresco Community, Frappe/ERPNext, Jitsi Meet, Ghost, AIOStreams, Heyform, FastAPI

Support: ticket and chat support for hosting clients, written troubleshooting, remote sessions over SSH and RDP, incident response

Automation and code: Python, Bash, Java, Selenium, Scrapy, XPath, Node.js, Go, AWS EC2 and Lambda, Git, TypeScript, React, C#/.NET, PHP, C++, ffmpeg

EDUCATION

Systems Engineering, Politécnico Santiago Mariño, Mérida, Venezuela. 2024 to 2025, three semesters. Left to move to Italy.
